Amendments to these regulations

Please note: any amendments made prior to the event will be indicated using red strikethrough text. New text will be indicated using blue text.

Article C1 Definitions

C1.1 National Finals event

The National Finals event is managed by STEM Racing™ India and is held over several days to include various programmed social and competition activities. The event aims to provide all participants with an educational and personal development 'Experience of a Lifetime'. Specifically, the competition aims to determine the National Finals Champions of STEM Racing™ India according to the 2026 STEM Racing™ India National Finals Technical and Competition regulations.

C1.2 STEM Racing™ In-Country Co-Ordinator (ICC)

Person/s and/or an organization approved by STEM Racing™ to manage and co-ordinate STEM Racing™ within a specified country or region of the world.

C1.3 Parc fermé

A secure area where all submitted cars and components are held to prevent unauthorized handling but to allow technical inspections to be conducted by the Judges. (Literal meaning in French of 'closed park').

C1.4 Competition Program

The competition program will detail the schedule of judging activities for all teams.

C1.5 National Finals terms and conditions for entry

This is a document issued by STEM Racing™ India which constitutes an agreement between STEM Racing™, ICC's and supervising teachers regarding participation by teams in the National Finals event.

C1.6 Key performance indicators (KPI's)

These are portions of text that feature on the scorecards within a corresponding points range. The KPI's describe the type of evidence the Judges will be looking for in order to score the team appropriately.

C1.7 Car race time value

A 'car race time' value is the actual time taken for a STEM Racing™ India car to travel the track from start to finish, measured from the instant the start box fires to when the car breaks the finish line timing beam. In the case of reaction races, the 'car race time' value is calculated as the 'total race time' value displayed on the electronic start gate minus the 'reaction time' value displayed for that race. *Note- In virtual races, the car's race time is counted as the total race time.

C1.8 Total race time value

The 'total race time' value is displayed in the total time field on the electronic start gate at the conclusion of every race. This time is the sum of the 'car race time' value and any 'reaction time' value displayed on the electronic start gate.

C1.9 Reaction time value

A 'reaction time' value is the time recorded from the instant the five (5) start lights extinguish to the instant the start trigger is activated by the driver. This value is displayed in the reaction time field on the electronic start gate. *Note- For virtual races, the race will run in automatic mode.

C1.10 Project elements

These are any materials and resources that the team presents as part of its entry for any judging activity.

C1.11 Race event

The National Finals competition includes three separate race events. These are: Reaction Racing 1, Reaction Racing 2, and Knock-out Racing.

C1.12 Engineering drawings

Engineering drawings are CAD produced drawings, which along with relevant CAM program, could theoretically be used to manufacture the fully assembled car by a third party. Such drawings must include all relevant dimensions, tolerances and material information. STEM Racing™ India engineering drawings must include detail to specifically identify and prove compliance for the virtual cargo and wing surfaces. Engineering drawings can include: orthographic projection, auxiliary projection, section views, isometric projection, oblique projection, perspective and annotated renderings.

C1.13 Renderings

Renderings are images intended to illustrate the three-dimensional form of an object. These can be generated in isometric projection, oblique projection or perspective.

C1.14 Digital Upload Folder

This is a specific digital upload folder, where all digitally submitted work must be uploaded to STEM Racing™ India. Everyone will receive a link of Digital Upload Folder, which will be provided by email directly to competing teams after team registration.

C1.15 Partnerships

A partnership can be defined as a collaborative relationship between organizations. The purpose of this relationship is to work toward shared goals through a division of labor that all parties agree on.

Article C2 General information

C2.1 Competing teams

- C2.1.1** Each team must consist of a minimum of 3 students to a maximum of 6. If a student's date of birth falls after the 1st of January 2006 and they turned the age of 19 in the year the event takes place, they are eligible to compete.
- C2.1.2** Only members of the official competing team (maximum 6) are permitted to wear the team's uniform.
- C2.1.3** During the competition, only the official core team members (maximum of 6) can represent the team, Pit Display presentation, Scrutineering, Verbal Presentation, Design & Engineering judging, Project Management, Enterprise judging, racing, presentations, competition activities and any direct communication with the Chair of Judges or Event/Competition Directors.

- C2.1.4** Team members and team adults/coordinators are requested to join in virtual format through their official name registered in the competition and they must adhere to C2.1.3.

C2.2 Competition program, team number and team name

- C2.2.1** STEM Racing™ India will issue the competition program showing all scheduled judging activities, with judging times listed against team competition numbers.
- C2.2.2** STEM Racing™ India will determine the team number each team will be allocated. These team numbers will correspond with those published in the competition program.
- C2.2.3** No teams participating in the challenge are permitted to use any of the Formula One Word Marks (shown below) in their team name, logo, domain name, and/or any social media handle. For example, "Infinity F1" is not allowed and should be changed to something similar such as "Infinity" or "Team Infinity". No team will be permitted to use any of the prohibited word marks within their team name when participating in STEM Racing™ India from 2017 onwards.

The STEM RACING Logo, STEM RACING, FORMULA 1, FIA FORMULA ONE WORLD CHAMPIONSHIP, GRAND PRIX and related marks are trademarks of Formula One Licensing BV, a Formula 1 company. All rights reserved

- C2.2.4** Before event teams will be asked to define their official team's name and their "short" team's name. The official team's name will be used to identify your team by default. Please refer to C2.2.3 for guidance on creating a suitable team name. The short name is the name that will be displayed for your team where space is limited (for example, small on-screen graphics). This must be no more than 15 characters (including spaces) and be typed exactly as you want the name to appear.
- C2.2.5** Prohibited characters – Teams may be asked to alter their team and organization names if they contain special characters outside of A-Z, a-z, 0-9 as these may cause issues with data processing. Some of the reserved characters are listed below. These may be amended at any point by STEM Racing™ India. Superscript or subscript characters will also be ignored.

Team names **must not** include following reserved characters:

- < (less than)
- > (greater than)
- :
- " (double quote)
- / (forward slash)
- \ (backslash)
- | (vertical bar or pipe)
- ? (question mark)
- * (asterisk)

C2.3 Team responsibilities

- C2.3.1** Teams must read the National Finals Technical Regulations carefully to ensure their cars comply with those regulations.
- C2.3.2** Teams must read the National Finals Competition Regulations (this document) carefully to ensure that all project elements satisfy these regulations and that they understand the requirements and procedures for all aspects of the competition and judging.

- C2.3.3** During the competition it is the team's responsibility to ensure that team members are present at the correct time and location for all scheduled activities.

C2.4 Role and responsibility of supervising teacher/adult

- C2.4.1** All the supervising teachers/adults should carefully read and understand the terms and conditions for participation to the STEM Racing™ India National Finals event, and must have explained all relevant information within this agreement to their team/s.
- C2.4.2** It is the primary responsibility of any event accredited supervising teacher/adult to ensure duty of care/well-being for all their student team members, as appropriate for their home country legislation. Any concerns arising during the event in relation to this should be brought to the attention of the STEM Racing™ India Event Directors immediately.
- C2.4.3** Any incident considered inappropriate will be brought to the attention of the Chair of Judges and 10 penalty points may be applied to their associated team.

C2.5 Regulations documents

- C2.5.1** STEM Racing™ India issues the regulations, their revisions and amendments made.
- C2.5.2** Competition Regulations – (This document). The Competition Regulations document is mainly concerned with regulations and procedures directly related to judging and the competition event. Competition Regulation articles have 'C' prefix.
- C2.5.3** Technical Regulations – A document; separate to this one which is mainly concerned with those regulations that are directly related to STEM Racing™ India car design and manufacture. Technical Regulation articles have a 'T' prefix.

C2.6 Interpretation of the regulations

- C2.6.1** The final text of these regulations is in English, should any dispute arise over their interpretation, the regulation text, diagrams and any related definitions should be considered together for the purpose of interpretation.
- C2.6.2** Text clarification - Any frequently asked questions that are deemed by STEM Racing™ India to be related to text needing clarification will be answered. The question and the clarification will be published to all teams at the same time.

C2.7 Supplementary competition regulations

Other documents may be issued by STEM Racing™ India that provide teams with further logistic and other important event information. Any supplementary regulations will be issued to all lead teachers and team managers, where the team manager has supplied STEM Racing™ India with a contact email address. Copies of all supplementary regulations issued will be available online either via email or social media pages.

C2.8 Design ideas and regulation compliance queries

Teams are not permitted to seek a ruling from STEM Racing™ India or any competition official or judge before the event as to whether a design idea complies with the regulations. Rulings will only be made by the Judges at the National Finals event. Design compliance to the regulation's forms part of the competition. As in Formula 1®, innovation is encouraged, and STEM Racing™ India teams may also find, sometimes controversial, ways of creating design features by pushing the boundaries in order to get an extra competitive edge.

C2.9 Team partnerships

- C2.9.1** STEM Racing™ India teams are encouraged to develop mentoring partnerships with businesses, industry, or higher education organizations throughout their project.
- C2.9.2** All design work, text and scripting for all project elements presented for assessment must be wholly undertaken and created by the team. This includes all CAD and CAM data, electronic portfolio and graphic content.
- C2.9.3** All aspects of any partnerships should also be represented in the team's portfolio. For project elements produced utilizing some outside assistance, teams should be able to demonstrate to the Judges a high level of understanding of, and justification for, any of the processes used.
- C2.9.4** 'Common sense' will prevail for project elements or components that a team has purchased from a supplier. E.g. bearings, screw eye, display hardware. Teams should be able to explain and justify why a specific component was selected / purchased over other similar available components.

C2.10 Mandatory project elements required for National Finals entry

Following is a summary of the mandatory elements required for judging:

- Two (2) identical STEM Racing™ India cars including all optional replacement components
- One (1) digital copy of the Design & Engineering Portfolio
- One (1) digital copy of the Project Management Portfolio
- One (1) digital copy of Enterprise Portfolio
- A Pit Display
- A 10-minute Verbal Presentation
- A set of engineering drawings including orthographic and 3D renders for Scrutineering judging.
- A digital team logo
- All relevant CAD data and access to CAD software
- Car Submission Checklist which must include the official STEM RACING Model Block holographic stickers

The above list is detailed in the remainder of ARTICLE C2.

- C2.10.1** Cars - Each team must produce two (2) identical STEM Racing™ India race cars.

C2.10.2

Portfolios - Each team must produce:

One (1) digital copy A3, 11-page (maximum) Design & Engineering portfolio

One (1) digital copy A3, 12-page (maximum) Enterprise portfolio

One (1) digital copy A3, 7-page (maximum) Project Management portfolio

Portfolios must be presented in an A3 (or equivalent) sized format. Refer to ARTICLE, C5, C6 & C7 of these regulations along with the Design & Engineering, Project Management and Enterprise judging scorecards for portfolio requirements.

If you have any issues uploading your documents, you can also submit them by email to competitions@stemplify.com. It is recommended that when creating PDF files, teams consider embedding any unusual font types they may have used within their documents to help ensure they display correctly when opened by the Judges.

The following file conventions must be adhered to:

Documents must be submitted in separate single Portable Document Format (PDF) files.

PDF files must be no greater than 40MB in size for the email option and no greater than 40MB for the STEM Racing™ India upload folder option.

Text included in the PDF files must be **highlightable** to facilitate the similarity checking process. STEM Racing™ India reserves the right to impose a penalty of up to 20 points to any team failing to comply with this request at the discretion of the chair of judges.

The files must be named:

"teamnumber_teamname_design&engineering.pdf",

"teamnumber_teamname_projectmanagement.pdf"

"teamnumber_teamname_enterprise.pdf"

"teamnumber_teamname_render.pdf"

"teamnumber_teamname_engineeringdrawings.pdf" so they can be recognized easily when submitted.

For example: **"T01_STEMRACINGIndia_projectmanagement.pdf"**.

C2.10.3

Pit display -Each team must comply to pit display dimension/regulations to present it in virtual format. Refer to ARTICLE C7 for further pit display specifications and content requirements.

C2.10.4

Verbal Presentation - Teams will be required to deliver a Verbal Presentation in relation to their project to the Judges. The presentation must not last longer than 10 minutes. Teams should bring their own laptop with any slide show or other multimedia files that need to be shown as part of their Verbal Presentation. Refer to ARTICLE C8 of these regulations for details regarding presentation content and other requirements.

C2.10.5

Electronic data - Teams must submit all additional project data as specified below:

Data submitted must include:

All CAD parts and assembly files to assist the scrutineering process.

The files must be named: **"teamnumber_teamname_filename"**, so they can be recognized easily when submitted. For example: **"T01_STEMRACINGIndia_fullcar_assembly.stl"**.

- C2.10.6** Engineering Drawings (refer to ARTICLE C1.12) and Renderings (refer to ARTICLE C1.13) for Specification Judging. Teams must submit a digital copy of any engineering drawings and renderings of their car assembly and parts they wish to be referenced by the Engineering and Specification Judges.

Each team must produce:

- One (1) digital copy of A4 Engineering drawings including orthographic view
- One (1) digital copy of A4 3D car renders

Mandatory table of contents for Engineering Drawings

Teams **MUST** include the following Engineering Drawing Table of Contents

Orthographic drawings with detailed dimensions of fully assembled car indicating regulation compliance

Exploded isometric drawing with key to main components

- a. Car body
- b. Virtual cargo
- c. Chamber
- d. Tether line guides
- e. Front wheels / wheel support system
- f. Rear wheels / Wheel support system
- g. Nose cone
- h. Front wing / support structure
- i. Rear wing / support structure

Orthographic drawings with detailed dimensions of virtual cargo including a sectioned view.

Location of official STEM Racing™ India decals dimensioned from key structural parts (e.g. wheel center).

Chamber details including wall thickness and depth.

Orthographic drawings with detailed dimensions of tether line guides.

Orthographic drawings of wheels with sectioned view and detailed dimensions.

Orthographic drawings with detailed dimensions of front wheels / wheel support system.

Orthographic drawings with detailed dimensions of rear wheels / wheel support system.

Orthographic drawings with detailed dimensions of nose cone.

Orthographic drawings with detailed dimensions of front wing and support structure highlighting wing surface/boundary.

Orthographic drawings with detailed dimensions of rear wing and support structure highlighting wing surface/boundary.

Detailed description of intended quality and finish in relation to individual components /assembled car.

- C2.10.7** Computer for Design & Engineering judging - a computer with the CAD software used by the team and with all CAD parts and assembly data should be used during the Design & Engineering judging session so that the team can demonstrate their CAD work and better explain how they engineered their car design.

C2.11 Team registration

- C2.11.1** Teams are required to register with STEM Racing™ India through TEAM ACKNOWLEDGEMENT FORM. The team manager and supervising adult for each team must submit their project elements.

- C2.11.2** Official STEM Racing™ India 30x15mm car decals will be provided for teams that have not manufactured their own. These decals must be fitted to each of the two submitted cars by the STEM Racing™ India team during Specification judging. You can download the decal artwork [here](#).

C2.12 Submission of project elements

C2.12.1 A time and location will be shared, where each team must submit their project elements. This will occur well before judging commences. Following is a list of the elements which must be submitted by each team:

PHYSICAL PROJECT ELEMENTS

One (1) nominated Car A identified using a white or black background STEM Racing™ India 'Car A' logo decal

One (1) nominated Car B identified using a white or black background STEM Racing™ India 'Car B' logo decal

Optional Replacement Components

Nose cone & front wing assembly – maximum of two (2)

Rear wing assembly – maximum of two (2)

Front wheels – maximum of four (4)

Front wheel support structure – maximum of two (2)

Rear wheels – maximum of four (4)

Rear wheel support structure – maximum of two (2)

Project Elements Submission Checklist, which must include the official STEM RACING Model Block holographic sticker.

DIGITAL COPY OF PROJECT ELEMENTS

1 x digital copy of A3, 11-page (1-page front cover + 10 pages of content) Design & Engineering Portfolio

1 x digital copy of A3, 12-page (1-page front cover + 10 pages of content + 1 page back cover) Enterprise Portfolio

1 x digital copy of A3, 7-page (1-page front cover + 6 pages of content) Project Management Portfolio

Digital copy A4 Engineering drawings (with mandatory table of contents)

Digital copy A4 Car renders for Scrutineering judging

Electronic copy of all additional project data

Annexure C and Annexure D (Optional)

C2.12.2 During project submission, each team car will be weight on the official National Finals scales.

C2.12.3 Small colored 'dot' stickers (approximately 5mm in diameter) and supplied by STEM Racing™ India, will be adhered to the underside of each car. The stickers will feature the team's competition number.

C2.12.4 Once cars and replacement components have been submitted, they are considered as being in parc fermé.

C2.13 Project elements to be retained by STEM Racing™ India

It is a condition of National Finals entry that each team permits STEM Racing™ India to retain one (1) car. Teams also permit STEM Racing™ India to use any of these project elements for marketing purposes and/or publication as exemplar projects for reference by others.

C2.14 Benefit of doubt

The Chair of Judges will, where appropriate, seek to use 'benefit of doubt' when the assessment of compliance is marginal or unclear. In this situation, teams will be given the benefit of doubt rather than a firm penalty if a penalty cannot be clearly measured or identified.

C2.15 Spirit of the competition

Teams are expected to act in the spirit of the competition, both before and during the STEM Racing™ India National Finals. Any team deemed by the Chair of Judges to be acting outside of the spirit of the competition, can be removed from certain or all aspects of the competition. For example, a team attempting to abuse the technical regulations to their advantage may,

at the discretion of the Chair of Judges, be removed from racing and receive no points for this activity. A team deemed to be acting in an unsportsmanlike manner towards another team or other persons may be removed from some or all judging areas.

The spirit of the competition is simple; embrace and respect the rules and regulations, do your very best to compete legally and fairly, while contributing positively to the STEM Racing™ India National Finals. Make friends, create positive relationships, network professionally and enjoy yourselves.

C2.16 Plagiarism

Plagiarism within any project work submitted by teams is not permitted. All teams must complete the Originality Declaration as part of their online team registration. Where plagiarism has been detected, the Chair of Judges may choose to penalize or exclude the team from that element of the competition.

Article C3 Competition and judging format

C3.1 Competition program

- C3.1.1** Each team will be judged as per the competition program. The competition program will be formulated by STEM Racing™ India to best and fairly accommodate all judging and other competition activities. Teams will rotate around judging activities as per this program, with each rotation usually of 20 minutes in duration.
- C3.1.2** Judging Streams – The competition program will normally be divided into multiple parallel judging streams (Stream A, Stream B, Stream C and Stream D), to help ensure quality judging time intervals within the event time constraints. A number of strategies are implemented within the judging process, including judge briefings and judge reviews for cross-moderation to ensure there is consistency across the judging streams.

C3.2 Judging categories

There are six (6) main judging categories, each with its own team of Judges/officials and specified judging activities as detailed in further articles.

- Specification & Scrutineering Judging
- Design & Engineering Judging
- Project Management Judging
- Enterprise Judging
- Verbal Presentation Judging
- Racing

C3.3 Judging scorecards

The STEM Racing™ India National Finals judging scorecards provide detailed information in relation to what the Judges will be looking for. They include key performance indicators, which are referred to by the Judges in awarding points during judging activities. The 2026 National Finals judging scorecards can be found in the appendix of this document. Please read the whole document without assumptions from previous rules documents.

READING THE SCORECARDS CAREFULLY IS IMPORTANT. THEY PROVIDE CRITICAL INFORMATION FOR TEAMS AS TO WHAT NEEDS TO BE PRESENTED FOR EACH JUDGING CATEGORY.

C3.4 National Finals Champions

The STEM Racing™ India National Finals Champions perpetual trophy will be awarded to the team with the highest sum total from all judging categories (ARTICLE C3.5). In the case of a tied points score, the team with the highest Knock-out score will be determined the winner.

THE CHAIR OF JUDGE'S DECISION IS FINAL

C3.5 Point allocations

Points will be awarded to teams across six (6) categories with maximum possible scores as detailed in the following table:

National Finals Judging Categories and Point Allocations

JUDGING CATEGORY	SCORED AREA	POINTS
Specification & Scrutineering Judging	Specifications	100 points
Specification & Scrutineering Judging	Engineering Drawings	20 points
Specification & Scrutineering Judging	3D Renders	20 points
Specification & Scrutineering Judging	Quality of Finish and Assembly	20 points
Design & Engineering Judging	Design & Engineering Portfolio	180 points
Project Management Judging	Initiating	35 points
Project Management Judging	Planning	25 points
Project Management Judging	Executing	20 points
Project Management Judging	Monitor and Controlling	10 points
Enterprise Judging	Enterprise Portfolio Only Assessment	100 points
Enterprise Judging	Team Identity	20 points
Enterprise Judging	Pit Display	60 points
Verbal Presentation Judging	Technique	60 points
Verbal Presentation Judging	Composition	40 points
Verbal Presentation Judging	Subject Matter	40 points
Racing	Reaction Racing	105 points
Racing	Knock-Out Racing	135 points
Racing	Fastest Car Bonus	10 points
TOTAL		1000 points

The Rules Committee may at their discretion add point scoring judging categories into the event. This would be completed under controlled conditions during the competition.

C3.6 Classification of technical regulations

C3.6.1 The technical regulations are classified as either: GENERAL, SAFETY, PERFORMANCE.

GENERAL	SAFETY	PERFORMANCE
Regulations that shape the way the car fundamentally looks and works, vital to the style of a STEM Racing™ India car.	Mandatory rules that govern the safe running of the car. Cars must meet these rules to be considered 'safe to race'.	Rules that have a direct impact on the performance of the vehicle, these typically carry the heaviest penalties.

C3.6.2 If a race car is judged as being NON-COMPLIANT with any Performance regulation they will be **INELIGIBLE** for the awards of: 'Fastest Car' and 'Best Engineered Car'.

If a race car is judged as being NON-COMPLIANT with any Performance regulation, racing leaderboards will show an "under investigation" symbol next to the team's race time.

For the Knock-out Competition, should there be any teams with Performance regulation failure(s) for both cars seeded in the top 16 teams then they will only be permitted to race in round one of the knock-out competition and will be automatically knocked out during round one regardless of the race result.

All Performance regulations are highlighted in yellow throughout the Technical Regulations Document:

T3.3, T3.6, T4.2, T4.4.1, T5.6, T7.2, T7.3, T7.4, T7.5, T7.6, T7.7, T7.8, T7.9, T7.10, T7.11, T8.6.1, T8.6.2, T8.6.3, T8.7, T8.8, T9.5.1, T9.5.2, T9.5.3, T9.6, T9.7.

For more information regarding Compliance with regulations, please consult T2.5 of the Technical Regulations document.

Article C4 Specification & scrutineering judging (160 points)

C4.1 What will be judged?

Specification & Scrutineering judging is a detailed inspection process where BOTH race cars plus the optional replacement components are assessed for compliance with the STEM Racing™ India National Finals Technical Regulations. The Engineering drawings, renderings and quality of finish & assembly will also be assessed. Refer to the scrutineering and specification judging scorecards for scoring details.

C4.1.1 Optional replacement components must be identical in design to those fitted to both cars (Car A & Car B) and must be submitted with the cars. Only the following replacement components are permitted:

Nose cone & front wing assembly – maximum of two (2)

Rear wing assembly – maximum of two (2)

Front wheels – maximum of four (4)

Front wheel support structure – maximum of two (2)

Rear wheels – maximum of four (4)

Rear wheel support structure – maximum of two (2)

Halo & Helmet – maximum of two (2)

Submitted replacement components that are determined by the Judges to not be identical to that which are fitted to the car will not be allowed to be used. Submitted components will remain in parc fermé.

C4.2 Team preparation

Teams must ensure that their cars (Car A & Car B) and any optional replacement components are complete and ready for specification judging and racing before they are submitted. Notice is also drawn to the performance regulations, refer ARTICLE C3.6. Teams must have also submitted an electronic copy of all specified project data such as scrutineering engineering drawings, which may all be referenced. Refer ARTICLE C2.10

C4.3 Who needs to attend?

This inspection will take place once the car is submitted. Teams will proceed through virtual judging rooms for rectification at the time of scrutineering judging.

C4.4 Judging process/procedure

Teams begin specification judging with a full allocation of 100 points. Any infringements of the Technical Regulation articles, on either car, will result in points being deducted as detailed in the Technical Regulations.

In addition, the engineering drawings, renderings, and overall quality of finish and assembly will be assessed, though this evaluation will occur behind closed doors. Refer to the scrutineering and specification judging scorecards for detailed scoring criteria.

CONTINUAL ASSESSMENT

Spot checks of the cars may take place at any point during the competition. STEM Racing reserves the right to review specification results if necessary. Teams will be informed of any changes to the initial assessment, and an appeal window may be made available at the discretion of the Chair of Judges.

C4.5 Safe/Fit to race fix

Teams that have been judged during scrutineering to have incurred a Safe/Fit to Race regulation from the list below will be provided with a special 10-minute car service time also called rectification, prior to the commencement of racing. Cars must meet these rules to be considered 'Safe/Fit to race. If during this service time the car can be modified so as to comply with the failed regulation(s), the team will then only incur HALF the point's penalty for that infringement, without being classified as having incurred a SAFETY infringement.

T3.2 T4.4.4, T4.4.5, T5.1, T5.3, T5.4, T5.5, T5.6, T6.1, T6.2, T6.3 and T7.13

C4.6 Specification judging decision appeals

From the World Finals 2026 Competition Regulations. This clause is listed in the contents of the India National Finals PDF but its text is missing from the body of that PDF. The wording below is the World Finals text (it names the World Finals contact and refers to "racing day 2"). Check the timings and contact with STEM Racing™ India before relying on it.

C4.6.1 Scrutineering Decision Appeals

These must be submitted within two hours of the team completing their specification review judging. Other rules for submitting these will be the same as for protests.

C4.6.2 Submitting a Protest

Any protest issues must only be submitted by the team manager by email (global-admin@stemracing.com) to an Event Director, who will register this and immediately submit it to the Chair of Judges. This must occur no later than 21:00 (local time) on racing day 2. Any protest or appeals submitted after this time may be disregarded. The Chair of Judges' decision related to any protest is final.

Teams should carefully consider their grounds for submitting a protest or appeal. Any protest or appeal that is unsuccessful, with the Judges initial decision remaining unchanged, will result in the team having a 15-point penalty applied against their total score.

Article C5 Design & engineering judging (180 points)

C5.1 What will be judged?

The Design & Engineering Judges will examine each team's 11-page Design & Engineering portfolio so that they can assess the teams' car design and use of CAD/CAM technologies along with the quality of manufacture of both race cars submitted. The specific areas to be assessed are:

- Design Concepts
- CAD 3D Modelling
- Application of Computer Aided Analysis
- Use of CAM/CNC
- Other Manufacturing & Assembly
- Research & Development
- Testing
- Design Process Evaluation
- Document Presentation

Refer to the Design & Engineering judging scorecard for key performance indicator information.

C5.2 Team preparation

A laptop needs to be ready for presentation in the Design & Engineering judging along with any other items which may help the team explain any engineering or manufacturing concepts. The Design & Engineering Judges will not have access to the team pit display for judging purposes. Teams may choose to, but do not need to take their display (3rd) car to the Design & Engineering judging. Preparation should include careful reading of the scorecard. The key performance indicators for the design process, application of CAD / CAM, analysis and associated data organization, describe what the Judges will be looking for.

C5.3 Who needs to attend?

This judging session must be attended by the team manager and team design and manufacturing engineers as a minimum.

C5.4 Judging process / procedure

Teams will be awarded points as per the key performance indicators shown on the Design & Engineering scorecard. Judges will review the Design & Engineering portfolio in a 'closed to teams' session programmed before the commencement of scheduled judging sessions. The scheduled Design & Engineering judging interview session will focus on the overall engineering and design of the car. This is an informal interview where Judges will ask the team to demonstrate their CAD / CAM work and query teams on what they have done. The quality of car manufacture and car assembly will be judged during a separate 'closed to teams' session.

C5.5 Design & Engineering Portfolio requirements

The Design & Engineering portfolio must be in a digital copy of A3 or similar size. The portfolio is limited to 11 pages (1-page front cover + 10 pages of content). This can be a single page front cover plus 10 single sided. If a portfolio comprises more than 11 pages, the Judges will only review the first 11 pages for assessment purposes. There MUST be content related to

the use of CAM and CNC manufacturing included in the portfolio and this will be referenced by the Engineering Judges. Content related to the car, design ideas, design development, research, testing and evaluation should be presented within the portfolio.

Article C6 Project management judging (90 points)

C6.1 What will be judged?

The Project Management judges will examine each team's 7-page Project Management Portfolio so that they can assess the following specific areas.

Project Management:

- Initiating

 - Initiation Process

 - Project schedule

- Planning

 - Budget & Resource management

 - Roles and Responsibilities

- Executing

 - Team & Stakeholder Communications

 - Risk Management

- Monitor and Controlling

 - Monitoring & Controlling

Refer to the Project Management scorecard for detailed point scoring and key performance indicator information.

C6.2 Team preparation

Each team must prepare one (1) Project Management portfolio as per ARTICLE C2.10. Most importantly, teams need to read the Project Management judging scorecard carefully to ensure that all areas to be assessed are included within the context of their Project Management portfolio.

C6.3 Who needs to attend?

All team members must be present during the PM judging session at the time of Pit Display.

C6.4 Judging process / procedure

The Project Management judging will take place during dedicated judging session. Team members may be asked questions by Judges to help them find certain content and/or seek further explanation. In addition to the scheduled judging session, the Judges will also be given time to conduct pre-judging and review of each team Project Management portfolio.

C6.5 Project Management Portfolio requirements

The Project Management Portfolio must be in a digital copy of A3 or similar size. The Project Management portfolio is limited to 7 pages (1-page front cover + 6 pages of content). This can be a single page front cover plus 6 single sided. If the portfolio comprises more than 7 pages, the Judges will only review the first 7 pages for assessment purposes.

For Project Management, teams are asked to detail their project management processes employed with the delivery of the STEM Racing™ Project. The STEM Racing™ Project Management Guide should be used for reference. You can find the guide [here](#).

The number of pages allocated to each key performance indicators is at the discretion of each team.

Article C7 Enterprise judging (180 points)

C7.1 What will be judged?

The Enterprise Judges will examine each team 12-page Enterprise Portfolio and Pit Display so that they can assess the following specific areas.

Enterprise Portfolio only assessment:

- Marketing Strategy & Materials
- Sponsorship & Return on Investment
- Digital Media Proficiency
- Sustainability
- Document Presentation

Pit Display

- Design Process (Documented in Enterprise Portfolio)
- Content, Clarity, and Impact
- Functionality & User Experience execution

Team Identity

- Overall Team Identity

The Pit Display Criteria (Design Process, Content, Clarity and Impact and Functionality & user experience) will primarily be based on the Pit display, Pit display designs, enterprise portfolio and the interviews with the Enterprise judges.

The Overall Team Identity will be assessed based by looking at all aspects of the team's identity. This will be primarily based on the Pit display, enterprise portfolio and the interviews with the Enterprise judges. Judges may also review other documentation, such as the engineering and project management portfolios and images of the car to confirm the team's identity has been applied consistently.

Refer to the Enterprise scorecard for detailed point scoring and key performance indicator information.

C7.2 Team preparation

Each team must prepare one (1) Enterprise Portfolio and Pit Display as per ARTICLE C2.10. Most importantly, teams need to read the Enterprise judging scorecard carefully to ensure that all areas to be assessed are included within the context of their Enterprise portfolio and Pit Display.

It is each team's decision how and where each area is presented. Teams should be mindful of the time constraints of judging when making these decisions.

C7.3 Who needs to attend?

All team members must be present during the display judging session.

C7.4 Judging process / procedure

The Enterprise judging will take place during dedicated judging session. Team members may be asked questions by Judges to help them find certain content and/or seek further explanation. In addition to the scheduled judging session, the Judges will also be given time to conduct pre-judging and review of each teams Enterprise Portfolio.

C7.5 Enterprise Portfolio requirements

The Enterprise Portfolios must be in a digital copy of A3 or similar size.

The Enterprise portfolio is limited to 12 pages (1-page front cover + 10 pages of content + 1 page back cover). This can be a single page front cover plus 10 single sided or 5 double sided sheets and a single page back cover. If the portfolio comprises more than 12 pages, the Judges will only review the first 11 pages for assessment purposes. The back cover of the portfolio should include the STEM Racing™ India logo, the team logo and a team photo.

Marketing Strategy & Materials

For the marketing element, teams are asked to summarise their approach and reasoning to gaining awareness via marketing activities.

Sponsorship & Return on Investment (ROI)

For this element, teams are asked to explain their engagement with sponsors, explaining the relationship and benefits. Teams should also explain their activities linked to return of investment.

Digital Media Proficiency

For this element, teams are asked to outline their approach and reasoning for social media platforms, electronic mailings, website, and other online communications. The Digital Media element within the document will be assessed in conjunction with a review of the team's Digital Media campaign executed.

Sustainability

For this criterion, teams are to outline their sustainability strategy and activities which give consideration to economic, environmental, and social factors.

The number of pages allocated to each key performance indicator is at the discretion of each team.

C7.6 Pit Display setup and parameters

- C7.6.1** The Team Pit Display is at the heart of a STEM Racing™ India event. It is the base of a team and says everything about a Team's identity, USP (Unique Selling Point), brand and design development journey. Display spaces are normally of approximate dimensions 2m wide x 1m deep x 2.4m high. The precise space description and dimensions will be announced closer to the event as "Pit Display Regulation".
- C7.6.2** No part of the teams completed Pit Display is allowed to protrude beyond the dimensions of their allocated pit space. This includes anything that might protrude above the pit space highest point e.g. flags. A penalty of up to 10 points may be applied at the chair of judge's discretion.
- C7.6.3** STEM Racing™ India and/or the Chair of Judges may instruct a team to take action to remove display inclusions deemed to be inappropriate.
- C7.6.4** As part of our sustainability objectives, teams will no longer be able to send pit displays as freight to National Finals 2026 event. If your team attempts to freight anything to the STEM Racing™ India, we will refuse delivery.
- C7.6.5** All pit display materials must be virtually presentable, by the team, into the National Finals event.

Article C8 Verbal presentation judging (140 points)

C8.1 What will be judged?

The Verbal Presentation Judges will assess each teams' 10-minute Verbal Presentation across the areas of technique, composition and subject matter:

Technique

Engagement & Presentation Dynamics

Team Contribution

Composition

Content Quality, Relevance & Subject Understanding

Time, Clarity and structure of content

Subject

Innovation – detail key innovations related to car design, project management, marketing or any other aspect of the team's project

Collaboration – detail any partnerships or mentoring from outside the team and justify in terms of improving project outcomes

STEM Racing™ India learning journey

Refer to the Verbal Presentation judging scorecard for detailed point scoring and key performance indicator information.

C8.2 Team preparation

Each team is required to prepare a Verbal Presentation as per the requirements at ARTICLE C2.10. Teams need to have all presentation resources tested and ready with them for Verbal Presentation judging. Most importantly, teams should read the Verbal Presentation judging scorecard carefully to ensure their Verbal Presentation features all elements and content that the Verbal Presentation Judges will be looking for.

C8.3 Who needs to attend?

All team members must be present during the Verbal Presentation judging session.

C8.4 Judging process / procedure

Verbal Presentation judging is scheduled for the same duration of other judging sessions, usually 20 minutes. Teams will be given an opportunity at the start of their time to set-up and test their laptop and any other presentation technologies and resources. The team will inform the Judges when they are ready to begin. The Judges start timing the 10-minute duration and will provide a discreet time warning signal when one minute of presentation time remains. The team will be asked to cease presenting when the time limit has been reached. At the conclusion of the teams' presentation time, the Judges may choose to provide some feedback and / or ask any clarifying questions they feel necessary.

C8.5 Verbal presentation judging provisions

STEM Racing™ India will provide a dedicated private space, such as a virtual meeting room, where each team will deliver their presentation to the Judges.

C8.6 Verbal presentation video recordings

The Verbal Presentations of all teams will be used for the purpose of judging review and/or may be used for post event publicity and promotional purposes by STEM Racing™ India.

Article C9 Racing (250 points)

C9.1 What races will be conducted?

The STEM Racing™ India National Finals racing points will be awarded through the staging of two types of race events:

Reaction Racing – automatic launch mode, 4 races in total, each car will race in one lane once over the 2 sessions.

Knock-out Competition Races – automatic launch mode, one race in each lane per round of competition (Qualification for the Knock-out, please see C9.7.1).

Reaction racing will be split over two sessions of two races. The 'car race time' value from all reaction races will determine the Fastest Car Award (refer C9.6). The knock-out competition is the last of the scheduled races. Refer to ARTICLE C3.5 and further information following for details on how points are calculated and awarded.

C9.2 Team preparation

- C9.2.1** Teams should be familiar with the operation of the STEM Racing™ India Race System. There will normally be a section demonstration track within the venue where teams can practice race starts during free time prior to their scheduled races.
- C9.2.2** Start line car staging – Race Judges will be responsible for staging the car at the start line. Team members are not permitted to adjust the car's alignment themselves but may request a single realignment by the judges. Under no circumstances may team members interfere with the Power Unit Cartridge or the vertical alignment of the start box. At the end of the staging process, all four wheels of the car must be in contact with the track surface.
- C9.2.3** Teams must ensure that both cars are race ready.

From the World Finals 2026 Competition Regulations. C9.4(e) and C9.7.2(f) in this document say "see C9.2.4". In the World Finals numbering, the start line car staging rule is C9.2.4. In this document the same rule is C9.2.2 (above), and there is no C9.2.4.

C9.3 Who needs to attend?

All team members must be present during their scheduled racing sessions.

C9.4 Reaction race procedure

Cars are launched in manual / driver reaction mode during two racing sessions, each comprising of one race total per team, one (1) race in each lane. The TOTAL RACE TIME displayed and the REACTION TIME displayed for each race is recorded. The reaction races will be conducted as follows:

- a) Teams race in order as shown in the competition program. To begin racing, the lowest team number will start in lane 1. All cars will be loaded onto the track, Car A first then Car B.
- b) One team member to track finish for deceleration system control.
- c) Judge arms Start Box - SAFETY ON.
- d) Race 1 (Car A) - Judge sets cars on track/tether line and inserts Power unit cartridge – makes initial start box adjustments.
- e) Please see C9.2.4 for more detail.
- f) Driver and team stands trackside with corresponding lane start trigger.
- g) Judge checks deceleration system is ready, all team members to stand in designated safety zone as instructed by track judges, track is clear for racing, team information on race system is correct, switches Start Box - SAFETY OFF.
- h) Judge presses the start system reset button – cars are launched by driver pressing start trigger.
- i) Judge records TOTAL RACE TIME and REACTION TIME displayed on start gate.
- j) Team member at finish moves car into storage zone at the end of the track.
- k) Race 2 (Car B) conducted in same lane as above, driver can be inter-changed as nominated.
- l) Team member at finish control returns car and empty power unit cartridge along track to the start with minimum handling.

- m) Judges remove cars from tether line and change lanes, team information on race system is correct.
- n) Cars removed from track and returned to Parc Fermé.

C9.5 Reaction race scoring

All two (2) 'total race times' recorded from the reaction races are considered. The fastest of these two (2) times is used in the following formulae to calculate the points awarded:

Fastest 'total race time' = 105 pts

2nd fastest 'total race time' = 100 pts

3rd fastest 'total race time' = 95 pts

Slowest 'total race time' = 5 pts

Base Time = 120% of 3rd fastest 'total race time'

4th fastest and all other teams score points using the following formula:

Team Points = $5 + (90 / (\text{Base Time} - \text{fastest 'total race time'})) \times (\text{Base Time} - \text{teams fastest 'total race time'})$

Any team with a best 'total race time' that is slower than the base time will score 5 points. To further discriminate between any teams scoring 5 points, a deduction of 1 point will be made for any did not finish (DNF) reaction race result.

C9.6 Knock-out race scoring

The 'car race times' recorded during racing will be considered. From the races, the team's best 'car race time' will be considered. This time is used to calculate the points awarded:

Eliminated in Round 1 (Round of 16) = 26 pts

Eliminated in Round 2 (Round of 8) = 52 pts

Eliminated in Quarter Final = 85 pts

Eliminated in Semi Final = 106 pts

Knock-out Winner = 135 pts

All remaining team's will get 10 pts.

A deduction will be made of 2.5 points for any did not finish (DNF) Knock-out result.

C9.6.1 Fastest Car Race Time Bonus

A 10-point bonus will be awarded to the team with the single fastest 'car race time' value from all time-trial races.

C9.7 Knock-out Competition

Teams will take part in a knock-out (single elimination) competition. Teams will be issued the knock-out competition seeding and competition bracket prior to the race event commencing. The number of participating teams will be confirmed closer to the event.

- C9.7.1 Seeding - The seeding order for the first knock-out round is determined through seeding all teams using the average fastest 'total race time' they achieved from the Knock-out racing event.

C9.7.2 Knock-out competition procedure - During the knock-out competition one race car will be used. Cars are launched in manual / driver reaction mode, with one (1) race in the knock-out. The team with the fastest 'total race time', as displayed on the start gate, from the races conducted, is the winner of that knock-out round.

The knock-out competition will be conducted as follows:

- a) Teams race in order of the competition draw. Top of draw in lane 1.
- b) Prior to the cars being set on the track for each round, each team will be required to nominate which car (A or B) they will use for their race.
- c) One team member to track finish for deceleration system control.
- d) Judge arms start box - SAFETY ON – makes initial start box adjustments.
- e) Race 1 - Judge sets all cars on track / tether line and inserts power unit cartridge
- f) A team member is then allowed 30 seconds to 'fine tune' the alignment of their car, please see C9.2.4 for more detail. The deceleration system must also be set during this time.
- g) Driver stands trackside with corresponding lane start trigger.
- h) Judge checks deceleration system is ready, all team members to stand in designated safety zone as instructed by track judges, team information on race system is correct, track is clear for racing, switches start box - SAFETY OFF
- i) Judge presses the start system reset button – cars are launched by driver pressing start trigger.
- j) Judge records TOTAL RACE TIME displayed on start gate.
- k) Check team information on race system is correct
- l) Cars removed from track and returned to Parc Fermé.

C9.7.2 Knock-out competition scoring example. This will depend on the number of competing teams.

Points are awarded based on the round of competition a team is eliminated as follows:

Eliminated in Round 1 (Round of 16) = 26 pts

Eliminated in Round 2 (Round of 8) = 52 pts

Eliminated in Quarter Final = 85 pts

Eliminated in Semi Final = 106 pts

Knock-out Winner = 135 pts

C9.8 DNF (Did not Finish) race results

Damage or part separation occurring during a race, before the car crosses the finish line, (e.g. wheel or any other part of the car separating), or a car not crossing the finish line at all, effects in a DNF race result. The Judges may refer to video evidence to verify a DNF result.

C9.9 False Starts

C9.9.1 A false start (jump start) occurs when the driver depresses the trigger button before the 5 start gate lights have extinguished. The screen will display a false start message.

C9.9.2 All reaction false starts will incur a 2.5 point penalty and by default forfeit that race. This penalty does not apply to knock-out racing.

C9.9.3 During knock-out racing – If one team false starts (jump starts), the other team should continue to race as normal. The team who false started forfeits that race, scoring a DNF, and the other team's time is recorded.

C9.9.4 During any manual / driver starts, if a driver false starts and distracts the other driver the race will be re-run and the driver who caused the distraction will forfeit their race.

- C9.9.5** Distractions outside of the race start area will be assessed by the lead track judge and track officials to determine if the race should be re-run. All competitors must, and other spectators will be instructed to, keep noise down to a minimum and to not use flash photography.

C9.10 Track, tether line and timing system information

- C9.10.1** The STEM Racing™ India Elevated Race Track, supplied by Denford Ltd will be used. The official length of the track, from start line to finish is 20 meters. A monofilament tether line of diameter 0.6mm, fixed at the finish end, passes down the center of each lane. At the start end the line passes through 90 degrees over a single pulley

IMPORTANT: Teams are not permitted to add anything to the race track or race system. This includes the car staging area.

- C9.10.2** Launch/Timing - The STEM Racing™ India Launch/Timing System will be used for launching cars and timing races and driver reaction times to 1/1000th of a second.

C9.11 Car Deceleration Systems

- C9.11.1** Teams must use the deceleration system. The Deceleration System acts to bring cars to rest once crossing the finish line. STEM Racing™ India will provide a Deceleration System which is integrated into the final track section after the finish line.
- C9.11.2** The final 350mm of the track after deceleration systems is reserved for a storage zone to store raced cars before they are returned to the track start.

C9.12 Race Power Packs

Compressed gas cartridges to be used for all National Finals competition races will be supplied by STEM Racing™ India. Each race cartridge will be separately weighed before competition to ensure that all race cartridges used for races are within a weight range of 0.5 grams. All race cartridges will be kept in a temperature-controlled environment of 21 degrees Celsius.

C9.13 Car weight checks

Cars will have their weight checked at the race track prior to commencing a race event. This is done to ensure each car remains at a legal weight during all races. If a car is judged to have gone under weight whilst stored in parc fermé, the Judges will add ballast to return the car weight to what it was when first submitted to parc fermé, without penalty.

C9.14 Judges handling cars

The race Judges will not be required to comply with any special car handling requests made of them by teams. This includes use of any special gloves or tools.

Article C10 Car repairs and car servicing

C10.1 Car repairs

- C10.1.1** All damage issues and related repair work during racing is at the Judge's discretion and may be referred to the scrutineering Judges and/or Chair of Judges for a final decision.
- C10.1.2** No items can be removed or added to a car during racing, other than Power unit cartridges, except in the case of a repair.

C10.1.3 No penalty is applied for damage incurred during knock-out racing or a car's final race of any race event.

C10.2 Car servicing

- C10.2.1** Teams will be scheduled time to carry out penalty-free maintenance and repairs on their race cars in the designated car service area. There will be a car service session after race session. The duration of each car service session will be confirmed closer to the event.
- C10.2.2** A shorter car service session will be allowed between further rounds of the knockout competition.
- C10.2.3** Only team members and Judges are allowed to enter the car service area.
- C10.2.4** Tool kits are allowed to be taken into car service. Teams must supply all of their own tools and other necessary resources. Judges will not be able to assist teams with any additional resource requirements.
- C10.2.5** Maintenance and alterations can only be made to the front and rear wings, nose cone, tether line guides, wheels and wheel support systems. The car body **MUST NOT** be modified or substituted.
- C10.2.6** Each team will be required to complete a car service log form, declaring any maintenance or repair work completed. This will be validated by the Judges.
- C10.2.7** Teams must hand their race cars and completed car service log to the service area Judges **BEFORE** the conclusion of their scheduled service interval. A penalty will apply for exceeding the scheduled service time limit of 5 points for every minute late.

Article C11 Protests

C11.1 Scrutineering decision appeals

These must be submitted within two hours of the team completing their specification judging. Other rules for submitting these will be the same as for protests.

C11.2 Submitting a protest

Any protest issues must be submitted by the team manager to an Event Director, who will register this and immediately lodge it with the Chair of Judges. This must occur by the date and time stated in the event supplementary regulations. Any protest or appeals submitted after this time may be disregarded. All protests must be lodged in writing via the official protest form available from the Event Directors.

The Chair of Judges decision related to any protest is final.

C11.3 Unsuccessful protests

Teams should carefully consider their grounds for submitting a protest or appeal. Any protest or appeal that is unsuccessful, with the Judges initial decision remaining unchanged, will result in the team having a **15-point penalty** applied against their total score.

THE CHAIR OF JUDGE'S DECISION IS FINAL

Article C12 Judges

C12.1 Overview

There will be six (6) teams of Judges plus officials that form the entire judging panel. Each judging team will have one Judge appointed as the Lead Judge. Judges are nominees from ICC's and other education and industry experts invited by STEM Racing™ India. All Judges sign a 'declaration' and code of conduct to ensure there are no conflicts of interest with respect to Judges and the teams they are judging.

C12.2 Chair of Judges

An independent authority appointed by STEM Racing™ India to oversee all judging procedures. The Chair of Judges will determine the final judging decision where a protest has been submitted or other judging issue needs resolution. The Chair of Judges will also preside over a meeting of all Lead Judges to ratify the final results along with nominations and winners for relevant awards.

C12.3 The Judging teams

- C12.3.1** Specification & Scrutineering Judges - will assess both race cars plus the rendered images and engineering drawings as per the Specification & Scrutineering scorecards.
- C12.3.2** Design & Engineering Judges - will assess each team as per the Design & Engineering scorecard.
- C12.3.3** Verbal Presentation Judges – will assess each team as per the Verbal Presentation scorecard.
- C12.3.4** Project Management– will assess each team as per the Project Management scorecard.
- C12.3.5** Enterprise Judges – will assess each team as per the Enterprise and Pit Display and Team identity scorecards.
- C12.3.6** Race officials – will oversee and rule on all race events and any incidents.
- C12.3.7** Car servicing officials – will oversee all car service activities and rule on any infringements that may occur.

C12.4 Judging Decisions

THE DECISION OF THE JUDGES AND OFFICIALS IS FINAL.

Article C13 Awards

C13.1 Awards Celebration

The National Finals awards will be presented at the Awards Celebration.

C13.2 Participation Recognition

All students will receive an official participation certificate.

C13.3 List of awards to be presented

All awards below will be presented to the team that achieves the highest score in each category taken from the scorecards unless otherwise indicated (*) below. (this list may be amended at the discretion of STEM Racing™ India).

National Finals Champions – STEM Racing™ India

2nd Place
3rd Place
Best Collaboration Team Award*
Best Newcomer Award
Best Engineered Car Award
Scrutineering Award
Sponsorship & Marketing Award*
Innovative Thinking Award*
Chair of Judges Award*
Research and Development Award*
Fastest Car Award
Team Identity Award*
Pit Display Award*
Verbal Presentation Award*
Project Management Award*
Digital Media Award*
Knockout Champions
Women in Motorsport Award*
Sustainability Award*

Scrutineering Judging Scorecard

Scrutineering

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Engineering Drawings	0 1 2 3 4 5 Little or no detail, Little or no annotation. No table of contents. No regulation compliance was shown.	6 7 8 9 10 Basic views included. Some dimensions are included but not sufficient annotations. Insufficient regulation compliance was shown. A basic table of contents.	11 12 13 14 15 Multiple views including First or Third-angle orthographic projection matching the final car. Some parts or materials are represented. Some Regulation compliance shown (eg T. 4.2 Virtual Cargo identification.) Good table of contents.	16 17 18 19 20 First or Third-angle orthographic projection matching the final car and unrendered isometric view or similar. Additional views to show sufficient detail. Parts list/bill of materials. Excellent regulation compliance shown (eg T.4.2 Virtual Cargo identification.) Complete and ordered table of contents.
Rendering	0 1 2 3 4 5 Poor quality renders. Insufficient views.	6 7 8 9 10 Multiple views. Some inconsistencies matching the final car.	11 12 13 14 15 Multiple views. Good match to the final car Good render technique.	16 17 18 19 20 Multiple views. Perfect match to the final car including branding. Realistic environment and lighting High-end render technique.
Quality of Finish and Assembly	0 1 2 3 4 5 Poor finish and assembly. No justification for intended quality and finish documented in the final page of the engineering drawings document.	6 7 8 9 10 Reasonable finish with some inconsistencies. Reasonable assembly. Some justification for intended quality and finish is documented in the final page of the engineering drawings document.	11 12 13 14 15 Good overall intended finish. Intended quality and assembly with attention to detail. Justification for intended quality and finish is well documented in the final page of the engineering drawings document.	16 17 18 19 20 Intended quality, assembly and finish on all components is exceptional. The two cars are identical. Justification for intended quality and finish is comprehensively documented in the final page of the engineering drawings document.

Scrutineering Total = /60

Design & Engineering Scorecard

Design & Engineering Portfolio Only Assessment

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Design Concepts	0 1 2 3 4 5 Single or minimal concepts for car components with no links to research. No relevance to final car.	6 7 8 9 10 Basic concepts of car components with limited links to research. Limited relevance to final car.	11 12 13 14 15 Good technically inspired ideas that are relevant for different car components linked to research.	16 17 18 19 20 Excellent technically inspired ideas for multiple car components with research-detailed. Relevance of the concept strongly justified.
3D Modelling	0 1 2 3 4 5 Minimal application of 3D modelling techniques. Only final design 3D modelled.	6 7 8 9 10 Basic use of 3D modelling tools and techniques. More than 1 design included with different iterations.	11 12 13 14 15 Good use of advanced 3D modelling tools, showcasing skill and technique. Dimensional constraints of the STEM RACING model block considered. Design approach explained. Design for manufacture considerations noted. (ie fillets, tolerance of machining).	16 17 18 19 20 Expert use of a wide range of complex 3D modelling techniques, demonstrating exceptional skill and innovation. Design for manufacture directs process. (ie machining tool availability, fit clearances). Quality of CAD surfaces analyzed.
Application of Computer Aided Analysis	0 1 2 3 4 5 Poor choice and no justification of simulation parameters. Weak analysis with poorly presented/no results. No design choices made based on FEA/CFD study.	6 7 8 9 10 Limited choice and justification of simulation parameters. Limited analysis and results. Little to no design choices made based on FEA/CFD study.	11 12 13 14 15 Well-justified choice and understanding of simulation Good analysis with clear, well-presented results. Some design choices made based on FEA/CFD study.	16 17 18 19 20 Excellent choice & understanding of simulation parameters. Detailed analysis with clear, well-presented results. Proven design improvements made based on FEA/CFD study.
Use of CAM/CNC	0 1 2 3 4 5 No or minimal evidence of CAM/CNC understanding or manufacturing.	6 7 8 9 10 Basic evidence of CAM/CNC processes and manufacturing.	11 12 13 14 15 Good use and understanding of CAM/CNC processes to achieve manufacturing goals. Manufacturing issues noted with limited problem solving.	16 17 18 19 20 Evidence of excellent understanding of CAM/CNC technologies. Appropriate techniques and processes used to achieve manufacturing goals. Manufacturing issues discussed with innovative problem-solving solutions.
Other Manufacturing & Assembly	0 1 2 3 4 5 No or minimal manufacturing presented. No or minimal consideration of quality assurance and workplace safety documented. No or minimal justification of outsourcing.	6 7 8 9 10 The manufacturing process is mentioned without detail. Basic consideration of quality assurance and workplace safety documented. Basic justification of outsourcing.	11 12 13 14 15 Good manufacturing process and stages described. Good consideration of quality assurance and workplace safety documented. Appropriate use of manufacturing resources documented (i.e. tools, finishes, jigs, fixtures). Outsourcing clearly explained and justified.	16 17 18 19 20 Details all manufacturing stages and processes. Quality assurance and workplace safety considerations evident. Appropriate outsourcing justified with make vs buy analysis.
Research & Development	0 1 2 3 4 5 No or limited evidence of R&D.	6 7 8 9 10 Basic evidence of R&D with some principles considered.	11 12 13 14 15 Some scientific & mathematical theories and principles considered. Logical research based design developments explained and justified.	16 17 18 19 20 Relevant R&D throughout the entire product design & development cycle. Design concept developments refined and justified from research & test findings.
Testing	0 1 2 3 4 5 No or little evidence of testing on the fully assembled car and individual components.	6 7 8 9 10 Limited testing. Some evidence of method and outcomes on the fully assembled car and individual components.	11 12 13 14 15 Good testing. Different evidence of method and outcomes. Some evidence of virtual and physical testing on the fully assembled car and individual components.	16 17 18 19 20 Appropriate testing with excellent methods and outcomes documented. Comprehensive evidence of virtual and physical testing on the fully assembled car and individual components.
Design Process Evaluation	0 1 2 3 4 5 No or limited Ideas or process evaluations at different stages. No or limited documentation of evaluation-linked improvement actions.	6 7 8 9 10 Basic Ideas or process evaluations at different stages. Basic documentation of evaluation-linked improvement actions.	11 12 13 14 15 Multiple Ideas or process evaluations at different stages. Good documentation of evaluation-linked improvement actions.	16 17 18 19 20 Excellent ongoing idea evaluations linked to improvement actions. Comprehensive documentation of evaluation-linked improvement actions.
Document Presentation	0 1 2 3 4 5 Difficult to follow with basic presentation standard.	6 7 8 9 10 Basic organization.	11 12 13 14 15 Good and clear structure, well organized.	16 17 18 19 20 High impact and professional throughout. Consistent and clear organization.

Project Management Scorecard

Project Management Assessment – Initiating

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Initiation Process	0 1 2 3 4 5 No or limited evidence of an Initiation process.	6 7 8 9 10 Evidence of an Initiation process with goals and deliverables identified, leading to a basic scope statement.	11 12 13 14 15 Evidence of an Initiation process including Kick-off meeting. Project charter created with goals and deliverables identified. Good scope statement developed, identifying acceptance criteria for each deliverable.	16 17 18 19 20 Kick-off meeting evidenced. Detailed Project Charter created, clearly defining all deliverables. Comprehensive scope statement developed, identifying acceptance criteria for each deliverable.
Project Schedule	0 1 2 3 No or limited evidence of tasks to be completed.	4 5 6 7 Evidence of a project schedule, showing a breakdown of time required to complete essential tasks.	8 9 10 11 Clear evidence of a project schedule and Work Breakdown Structure. Detailed Gantt chart created to identify all tasks, dependencies, and time estimations. Resource allocation is included for major project phases.	12 13 14 15 Comprehensive project schedule with detailed Work Breakdown Structure and Gantt chart. All tasks, dependencies, and time estimations are clearly identified. Key dependencies are identified, and critical path analysis is included.

Initiating Total /35

Planning

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Budget and Resource Management	0 1 2 3 No or limited evidence of strategies to manage budget and/or resources.	4 5 6 7 Some evidence of resources required and how they are to be acquired and managed. Some evidence of budgeting.	8 9 10 11 Clear evidence of budgeting and use of basic accounting methods to track expenditure. Identification of where, when, and how resources are to be acquired and used. Initial cost estimates for major project components.	12 13 14 15 Comprehensive budgeting with detailed cost breakdown and methods for tracking expenditure. Thorough resource management plan, including procurement strategies, resource allocation, and utilization forecasts. Cost-benefit analysis for key project decisions.
Roles and Responsibilities	0 1 2 No or limited evidence of clear roles and responsibilities within team.	3 4 Team roles and responsibilities identified, with some evidence of task and/or activity breakdown.	5 6 7 Team members identified and a structured team created with defined job functions and appropriate responsibilities. Evidence of a basic Responsibility Assignment ('RACI') Matrix.	8 9 10 Highly structured team with clearly defined job functions, skill requirements, and detailed responsibilities. Comprehensive RACI Matrix covering all project activities. Evidence of a team development plan and strategies for managing team dynamics.

Planning Total /25

Executing

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Team & Stakeholder Communications	0 1 2 No or limited evidence of engagement between team members and stakeholders.	3 4 Evidence of a communication plan and engagements between team members and with stakeholders.	5 6 7 Clear communication plan implemented between team members and stakeholders. Key stakeholders registered and reported to regularly. Multiple communication tools used effectively.	8 9 10 Comprehensive communication strategy with tailored approaches for different stakeholder groups. Regular, documented communication with all stakeholders using diverse, appropriate channels. Evidence of feedback loops and continuous improvement in communication processes. Stakeholder engagement matrix utilized to manage relationships.
Risk Management	0 1 2 No or limited evidence of risk identification and management.	3 4 Evidence of risk identification and response management plans in place.	5 6 7 Clear evidence identifying all relevant risks, area(s) of impact and response planning. Assessment of impact on resources, timing, scope and quality.	8 9 10 Comprehensive risk management strategy including detailed risk register, risk analysis, and prioritization. Proactive risk strategies implemented with contingency plans. Regular risk reviews and updates throughout the project lifecycle. Evidence of opportunity management alongside risk management.

Executing Total /20

Monitoring and Controlling

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Monitoring & Controlling	0 1 2 No or limited or isolated project evaluation.	3 4 Ongoing evaluation of most areas. Documented evidence of problems identified and suggested solutions.	5 6 7 Regular 'Status Reports', documenting tasks signed off and highlighting areas of concern. Scope creep identified with a clear action plan for tasks that overrun. Key performance indicators (KPIs) tracked and reported.	8 9 10 Regular and detailed project tracking processes consistently applied. Comprehensive 'Status Reports' include: Analysis of work completed versus resources used, Comparison of planned versus actual progress, Predictions of future project performance, Clear procedures for managing project changes, with all modifications documented.

Monitoring and Controlling Total /10

Initiating + Planning + Executing + Monitoring and Controlling = Project Management Total = /90

Enterprise Scorecard

Enterprise Portfolio Only Assessment

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Marketing Strategy & Materials	0 1 2 3 4 5 Lack of coherent marketing strategy, poorly developed marketing materials, and minimal content relevance.	6 7 8 9 10 Partially coherent marketing strategy, average quality marketing materials, needs enhancement in content relevance.	11 12 13 14 15 Good marketing strategy, reasonably developed marketing materials, and satisfactory content relevance.	16 17 18 19 20 Well-defined marketing strategy, high-quality marketing materials, and highly relevant content.
Sponsorship & Return on Investment (ROI)	0 1 2 3 4 5 No or incomplete Sponsor/partner hierarchy. Limited understanding of sponsorship. No evidence of ROI.	6 7 8 9 10 Basic Sponsor/partner hierarchy and benefits included. Partial understanding of sponsorship. Some evidence of return of investment (ROI) to relevant sponsors.	11 12 13 14 15 A range of sponsor/partner hierarchy and benefits identified. Good understanding of sponsorship, reasonable investment, and satisfactory ROI to relevant sponsors.	16 17 18 19 20 Sponsor/partner hierarchy and benefits detailed and justified. Range of relevant sponsors/partners showing mutually beneficial relationships. Creative activities linked to return of investment (ROI).
Digital Media Proficiency	0 1 2 3 4 5 Limited understanding and utilization of digital media platforms. Minimal engagement with audience, and ineffective content creation.	6 7 8 9 10 Partial understanding and use of digital media platforms. Some evidence of strategy documented. Audience engagement needs improving.	11 12 13 14 15 Good understanding and utilization of digital media platforms. Good execution in line with documented strategy. Reasonable engagement, and content creation.	16 17 18 19 20 Strong understanding and effective utilization of digital media platforms in line with documented plans. High audience engagement, and impressive content creation.
Sustainability	0 1 2 3 4 5 No or limited understanding and implementation of sustainable practices. No or minimal awareness of environmental impact.	6 7 8 9 10 Partial understanding and inconsistent implementation of sustainable practices. Needs improvement in awareness of environmental impact. Some evidence of implementation.	11 12 13 14 15 Good understanding and moderate implementation of sustainable practices. Some awareness of environmental impact. Implementation documented considering different factors such as economic, environmental, and social.	16 17 18 19 20 Strong understanding and effective implementation of sustainable practices. High awareness of environmental impact and active involvement in sustainability initiatives considering economic, environmental, and social factors.
Document Presentation	0 1 2 3 4 5 Poor formatting, lack of structure. Minimal visual appeal in the document.	6 7 8 9 10 Average formatting with some structure. Needs improvement in the document visual appeal.	11 12 13 14 15 Good formatting, structured document. Satisfactory document visual appeal. Good organization.	16 17 18 19 20 Excellent formatting, well-structured document, and highly appealing visually. High impact and professional throughout. Consistent and clear organization.

Pit Display & Team Identity Scorecard

Pit Display Assessment

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Pit Display Design Process (Documented in Enterprise portfolio)	0 1 2 3 4 5 Limited planning and execution, lack of innovation, and minimal attention to detail in the design process.	6 7 8 9 10 Some planning and execution. Insufficient innovation. Needs improvement in attention to design details. Some ideas development documented.	11 12 13 14 15 Different ideas & justification of design. Good evidence of development considering factors including team identity, budget, sustainability and time constraints with consideration to functionality and user experience.	16 17 18 19 20 A range of ideas, clearly justified, creative final design. Comprehensive evidence of development considering factors including team identity, budget, sustainability and time constraints with consideration to functionality and user experience.
Pit Display Content Clarity and Impact	0 1 2 3 4 5 Repetition of Portfolio contents. Disorganised layout. Little or no evidence of marketing materials. Minimal information about the team's work.	6 7 8 9 10 Partially informative content. The pit display is not enhanced by Multimedia or Marketing materials. The Pit display needs more clarity detailing the team's work.	11 12 13 14 15 Good organisation and impact. Multimedia is used to enhance the display, with some marketing material on display. Clear and effective presentation and messaging about the team's work.	16 17 18 19 20 Clean, well-organised with high impact. Highly professional with attention to detail. Excellent integration of technology, multimedia and marketing materials. Comprehensive information about the team's work.
Functionality & User Experience execution	0 1 2 3 4 5 Non-functional or poorly functional design, inconvenient user experience. Lacks impact, and minimal overall visitor impression.	6 7 8 9 10 Basic functionality, average user experience, needs improvement in functionality and overall visitor impression.	11 12 13 14 15 Good functionality, and satisfactory user experience. Innovative Pit display and positive visitor impression.	16 17 18 19 20 Excellent functionality, seamless user experience, and impressive innovation across the Pit Display. A very positive impression on visitors.

Pit Display Total = /60

Team Identity

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Overall Team Identity	0 1 2 3 4 5 Inconsistent, limited or obscure identity through project elements. Weak team cohesion, lack of shared identity.	6 7 8 9 10 Partial team cohesion, and inconsistent shared identity through project elements.	11 12 13 14 15 Good team identity is consistent through various project components e.g. car matches team uniform.	16 17 18 19 20 Excellent and highly effective team identity. Team 'brand' consistently applied through all project elements.

Team Identity Total /20

Pit Display Total + Team Identity Total = /80

Verbal Presentation Scorecard

Technique

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Engagement & Presentation Dynamics	0 1 2 3 4 5 Monotonous presentation, lack of visual aids, and minimal interaction with audience. Poor delivery technique.	6 7 8 9 10 Limited team dynamics, some visual aids. Limited delivery technique and interaction with the audience.	11 12 13 14 15 Good team dynamics, effective visual aids, Good delivery and interaction with the audience.	16 17 18 19 20 Excellent engagement, captivating and highly interactive delivery, and strong audience connection. Exceptional team dynamics, and impactful visual aids.
Team Contribution	0 1 2 3 4 5 Single team member taking the lead in presentation.	6 7 8 9 10 Minimal team participation during the presentation.	11 12 13 14 15 Good contributions from most team members.	16 17 18 19 20 Excellent teamwork with all members participating effectively.

Technique Total /40

Composition

CRITERION	LOWEST BAND	SECOND BAND	THIRD BAND	TOP BAND
Content Quality, Relevance & Subject Understanding	0 1 2 3 4 5 Irrelevant or outdated content, lack of depth, and poor relevance. Unclear explanations.	6 7 8 9 10 Partially relevant content, some depth, needs improvement in quality and explanations.	11 12 13 14 15 Relevant content, good depth, and reasonably high-quality information. Clear explanations.	16 17 18 19 20 Highly relevant content, profound depth, and exceptional quality information with articulate explanations.
Time, Clarity and structure of content	0 1 2 3 4 5 Severe time management issues, with significant rushing or excessive time taken. Less than 8 minutes or more than 12 minutes. Incoherent structure, unclear message, and disorganized content.	6 7 8 9 10 Time management issues are evident, with noticeable rushing or excessive time taken. Less than 9 minutes or more than 11 minutes. Partially clear structure, some coherence, needs better content organization.	11 12 13 14 15 Good flow and time management of each topic with minimal rushing or excessive time taken. Clear structure, coherent flow, and organized content.	16 17 18 19 20 Excellent time management and balance of each topic without exceeding the time limit. Excellent structure, crystal-clear message (concept), and highly organized content. Excellent attention to detail.

Specifications Scorecard

For clarification on individual regulations, refer to the National Finals Technical Regulations. Please enter ✓ for a pass and F for a fail

(8g Pack) – measured with full 8g race power pack cartridges

The printed scorecard also has columns for recording results: Initial Scrutineering (Car A, Car B, CoI CS), Amendments (Car A, Car B, CoI CS) and Remarks.

ARTICLE T3 – FULLY ASSEMBLED CAR

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T3.1.1	Designed and engineered using CAD / CAM		-5
T3.1.2	Body manufactured using CNC only	Check unfinished body	-5
T3.1.3	F1 in Schools holographic sticker	Must be supplied	-5
T3.1.4	Race cars identical geometry	Visual check	-5
T3.2.1	Safe Construction – Specification judging	Check T3.2.1	-10
T3.3	Defined features	Check T1.1	-20
T3.4	Total width	Min: 65 Max: 85	-5
T3.5	Total height (8g Pack)	Max: 65	-5
T3.6	Total weight	Min: 50.0g	-10
T3.7	Track clearance (8g Pack)	Min: 1.5	-10
T3.8	Status during racing	Nothing removed	-5
T3.9	Replacement Components	Identical to fitted	
T3.9	Nose Cone & Front Wing Assembly	Max: 2	-5
T3.9	Rear Wing Assembly	Max: 2	-5
T3.9	Front Wheels	Max: 4	-5
T3.9	Front Wheel Support Structure	Max: 2	-5
T3.9	Rear Wheels	Max: 4	-5
T3.9	Rear Wheel Support Structure	Max: 2	-5

ARTICLE T4 – BODY

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T4.1	Body construction	F1 Model Block only	-20
T4.2	Virtual cargo – See T4.2 for dims	Between axles	-25
T4.3	Virtual cargo identification	Check Eng. drawing	-5
T4.4.1	Halo	Halo exists	-10
T4.4.2	Halo visibility front and side views	Side & front view	-10
T4.4.3	Halo visibility	Refer to Article T1.21	-10
T4.4.4	Halo circular notch height	34.0 (±1.0)	-5

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T4.4.5	Halo safety test	1kg test, safe to race	-5
T4.5	Helmet	Included	-5
T4.6	F1 in Schools logo decal location	Between Front & Rear wheels 100% Visible	-5
T4.7	Team Number	Min: 8.0	-2
T4.8	Decal Thickness	Max: 0.5	-5

ARTICLE T5 – RACE POWER PACK CARTRIDGE CHAMBER

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T5.1	Diameter	Min: 18 Max: 18.5	-5
T5.2	Distance from track surface (8g Pack)	Min: 30 Max: 40	-5
T5.3	Depth	Min: 45 Max: 58	-5
T5.4	Max angle of chamber (8g Pack)	Min: -3° Max: 3°	-5
T5.5	Chamber safety zone (8g Pack)	Min: 3	-10
T5.6	Power unit cartridge visibility (8g Pack)	Min: 5mm top view	-10

ARTICLE T6 – TETHER LINE GUIDES

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T6.1	Location	10mm in front / front axle 10mm behind / rear axle	-10
T6.2	Internal diameter	Min: 3.5 Max: 6	-5
T6.3	Tether line guide safety	200g test, safe to race	-10

ARTICLE T7 – WHEELS AND WHEEL SUPPORT STRUCTURES

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T7.1	Number and location	4, 2 x 2	-25
T7.2.1	Distance between opposing wheels – Front	Front Min: 38	-2.5
T7.2.2	Distance between opposing wheels – Rear	Rear Min: 30	-2.5
T7.3	Wheelbase	Min: 120 Max: 140	-5
T7.4	Track contact width	Front Min: 13 Rear Min: 17 exc. chamfer/fillet	-2.5 per wheel
T7.5	Diameter	Min: 28 Max: 32	-2.5 per wheel
T7.6	Racetrack contact (8g Pack)	All 4 in contact	-2.5 per wheel
T7.7	Rolling surface	Consistent, no tread	-2.5 per wheel
T7.8	Rotation	Abs. Max rolling incline: 3°	-5 per wheel
T7.9	Visibility in top and bottom views	In front of front wheels	-2.5
T7.9	Visibility in top and bottom views	Behind front wheels	-5
T7.9	Visibility in top and bottom views	In front of rear wheels	-5

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T7.9	Visibility in top and bottom views	Behind rear wheels	-2.5
T7.10	Visibility in side views	Side views	-10
T7.11	Visibility in front view (8g Pack)	Max obscured 20mm	-10
T7.12.1	Wheel support systems	Cylindrical volume	-5
T7.12.2	Wheel support systems identification	Check Eng. drawing	-5
T7.13	Wheel Safety Test	100g test per wheel	-2.5 -2.5 -2.5 -2.5

ARTICLE T8 – NOSE, FRONT WING AND WING SUPPORT STRUCTURES

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T8.1	Nose, front wing & wing support structure identification	Check Eng. drawing	-5
T8.2	Nose cone assembly dimension	Max: 40	-5
T8.3	Front wing(s) description and placement	Wings exist	-5
T8.4	Front wing(s) construction and rigidity	Span constant during racing + rigid	-5
T8.5.1	Nose and wing support structure location	In front of Reference Plane A & below 25mm	-10
T8.5.2	Front wing and front wing end plate location	In front of Reference Plane A & below 20mm	-10
T8.5.3	Front wing and end plate location	Outside the minimum legal span	-10
T8.6.1	Front wing span	Min: 50	-2
T8.6.2	Front wing chord	Min: 15 Max: 25	-1
T8.6.3	Front wing thickness	Min: 2 Max: 6	-1
T8.7	Front wing clear airflow	5mm clear 'air' space	-5
T8.8	Front wing visibility	Visible and not obstructed in front view	-10

ARTICLE T9 – REAR WING AND WING SUPPORT STRUCTURES

REG	REGULATION OVERVIEW	MIN/MAX QUICK GUIDE	PENALTY PER CAR
T9.1	Rear wing and wing support structure identification	Check Eng drawing	-5
T9.2	Rear wing(s) description and placement	Wings exist	-5
T9.3	Rear wing(s) construction and rigidity	Span constant during racing + rigid	-5

T9.7	Rear wing visibility	Visible and not obstructed in front view	-10

Race procedure & troubleshooting flowchart

From the World Finals 2026 Competition Regulations. The contents of the India National Finals PDF list this flowchart, but the PDF does not include it. It is the World Finals version (page 57). It mentions CO2 cartridges, whereas the Technical Regulations describe compressed air, and it is for reaction races.

Race procedure and troubleshooting flowchart, from the World Finals 2026 Competition Regulations, page 57.

The flowchart in text

Reaction Race starts.

Weigh cars and record on weight check sheet.

Load cars onto track as per race schedule. Lowest team number in Lane 1.

Drivers and teams stand trackside with corresponding start lane trigger.

One team member from each team to track finish for deceleration system control.

Race 1 (Car A): Judge sets car on track and tether line and inserts CO2 cartridge.

Judge arms Start Box (SAFETY ON) and makes initial adjustments.

Team member is allowed 30 seconds to 'fine tune' staging of the car.

Deceleration system ready?

No: wait until the deceleration system is ready. Change CO2 cartridge if long delay. Then continue.

Yes: continue.

SAFETY OFF. Cross check other lane.

Judge presses start system reset button.

Race run ok?

Yes: record reaction times and finish times. Then race 1 and 3: move cars into storage zone; race 2 and 4: return to track start and remove from tether line. Move Car B to launch area, and return to the step where the Judge arms the Start Box.

No: ask whether the car launch was ok.

Car launch ok?

Yes: was there a breakage? If yes, was it before the finish line? Before the finish line: check with officials or video footage, then ask whether it was verified before the line (Yes: record DNF against the race, then record breakage information; No: check with the Chair of Judges before proceeding). After the finish line: record breakage information. Then move cars into storage zone as above.

No: ask whether SAFETY was left on.

SAFETY left on?

Yes: record reaction time, run an automatic race for the affected car, and record track time plus reaction time.

No: check the Start Box. Start Box ok? Yes: record reaction time, run an automatic race for the affected car, and record track time plus reaction time. No: check with the Chair of Judges before proceeding.

Pit Display Reference Dimensions

Teams must design their pit displays using the **estimated** dimensions stated below. Detailed dimensions will be confirmed closer to event. At the discretion of the Chair of Judges, a penalty of up to 20 points may be applied for teams working outside these dimensions.

Pit display reference dimensions, as drawn in the PDF.

BOOTH

DIMENSION	SIZE
Wide	200Cm
Depth	100Cm
Height	240Cm
Header band across the top (marked in magenta)	30cm

Project Element Submission Checklist

Mandatory table of Content for Engineering Drawings

Teams MUST include the following Engineering Drawing Table of Contents

Orthographic drawings with detailed dimensions of fully assembled car indicating regulation compliance

Exploded isometric drawing with key to main components

- Car body
- Virtual cargo
- Chamber
- Tether line guides
- Front wheels / wheel support system
- Rear wheels / Wheel support system
- Nose cone
- Front wing / support structure

i. Rear wing / support structure

Orthographic drawings with detailed dimensions of virtual cargo including a sectioned view.

Location of official STEM Racing™ India decals dimensioned from key structural parts (eg wheel centre).

Chamber details including wall thickness and depth.

Orthographic drawings with detailed dimensions of tether line guides.

Orthographic drawings of wheels with sectioned view and detailed dimensions.

Orthographic drawings with detailed dimensions of front wheels / wheel support system.

Orthographic drawings with detailed dimensions of rear wheels / wheel support system.

Orthographic drawings with detailed dimensions of nose cone.

Orthographic drawings with detailed dimensions of front wing and support structure highlighting wing surface/boundary.

Orthographic drawings with detailed dimensions of rear wing and support structure highlighting wing surface/boundary.

Detailed description of intended quality and finish in relation to individual components / assembled car.
